DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6, 9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sharpe III et al.

Sharpe III et al. discloses the claimed invention (see previous Office Action for details) except that the controller 18A of Sharpe III et al. is not "located outside" of the appliance (in Sharpe III et al., the controller 18A is placed inside the appliance). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide an external controller to the appliance of Sharpe III et al. instead of using it as an internal controller, since using a controller externally or internally is clearly an obvious design choice and will accomplish the same result. Note that the Applicant's originally filed specification does not even suggest that locating the controller externally or "outside" of the appliance will produce new and unexpected results. In any event, it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japikse, 86 USPQ 70.

Application/Control Number: 09/755,674

Art Unit: 2181

Claims 7, 8, 15, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sharpe III et al., as applied to claims 1-6, 9-14, above, and further in view of the following.

Sharpe III et al. discloses the claimed invention including the use of a serial port (24) of a computer (20) for receiving the "first signal." However, Sharpe III et al. does not disclose the use of a parallel port (print port) of a computer (20) for receiving a "first signal." It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a parallel port (print port) to receive data (signal), since the Examiner takes Office Notice that the use of either a serial port or a parallel port to upload or download data (signal) is notoriously old and well-known in data processing art (exemplary supportive evidence was provided at the end of previous Office Action), and the selection of any known port including a parallel port (print port) is clearly within the level of skill in the art.

Response to Arguments

Applicant's arguments with respect to claims 1 and 9 have been considered but are most in view of the new ground of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Application/Control Number: 09/755,674 Page 4

Art Unit: 2181

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication should be directed to Khanh Dang at telephone number 703-308-0211.
